

# Cloud Backup

Safeguarding your vital data through reliable, scalable cloud storage – putting you in control of your backups.

## Key Benefits

### Why chose iCT4 Cloud Backup?

- ✓ Excellent value for money
- ✓ Cross-platform support: Windows and Mac OS X
- ✓ Secure – all data encrypted
- ✓ No additional hardware required
- ✓ No complex software installations
- ✓ Simple to use
- ✓ Data is kept off site in the event of total loss due to flood/fire or other serious event
- ✓ Support for Microsoft Exchange available
- ✓ Bandwidth control available to ensure other services requiring Internet access are not affected
- ✓ Bare metal recovery and block level backup ensures reliable backups of important data

Backups are often the last thing on our minds until it's too late and the data is gone. Thanks to ever-increasing amounts of student data and confidential records it is more important than ever to ensure a safe, secure and reliable backup solution in case the worst happens.

iCT4 Cloud Backup uses the power and flexibility of the Cloud, securely storing your files off site in data centres that are compliant with UK data security requirements to ensure the integrity and security of your information.

### Unrivalled value for money

There are no tapes to purchase, no backup servers to maintain and no hard drives to replace – iCT4 Cloud Backup just requires an Internet connection and a small local install to one of your existing servers.

### Security first

Unlike some tape or hard drive-based backup systems, our backup process is secure from the moment the data leaves your computer. The entire time your data is in transit and at rest in the Cloud, it's protected by AES 256-bit strength encryption.

### Easy to use

Our simple step-by-step backup and restore wizards quickly guide you through the process of securing or recovering your data – very little technical knowledge required. Don't forget, if you need a little help, our UK-based support team is always on hand to help out!

iCT4 Cloud Backup also supports virtualisation technologies such as Hyper-V and VMWare. Support for SQL backups is included as standard with Exchange server support available for a small additional premium.
